False positives follow workload and threshold, not model

Rate per configuration, with the false-positive count · 43 false positives in 5,270 decisions on pairs that should not be served

		Similarity threshold 0.70	0.75	0.80	0.85	0.90
FAQ	all-MiniLM-L6-v2	6.6 % 9 FP	3.6 % 5 FP	1.5 % 2 FP	0	0

False positives by model

all-MiniLM-L6-v2 26

ModernBERT 17

Two-way ANOVA

Workload $p = 0.019$

Model $p = 0.465$

Dissertation §5.2.3–5.2.4

Source: release/d3-results/results.csv · rate = FP / (FP + TN) over the inadmissible pairs
